For communities, researchers, and outreach educators, a web map is a powerful tool for soliciting input, getting the message out, and localizing seemingly abstract data. Google Earth and Google Maps have led this revolution in online maps by making it easy for practically anyone (even you) to create a custom web map of their own. But Google isn’t the only game in town. Esri, the creator of the most popular desktop GIS software, has recently launched ArcGIS Online - a more robust online mapping tool that doesn’t sacrifice ease of use or cost (it’s free!). This one-day hands-on workshop will teach you about ArcGIS Online and how to use it to create exciting, interactive web maps. Topics covered will include:

- ArcGIS Online versus Google mapping tools
- Creating custom maps in the ArcGIS Map Viewer
- Creating custom maps in ArcGIS Explorer Online
- Publishing maps and creating groups on ArcGIS.com
- Creating a Map Gallery
- Sharing and embedding web maps on your website

Note: This is an introductory course. Individuals registering for the course should be familiar with PCs and basic operations such as copying, deleting and renaming files, opening programs, etc. No prior GIS experience is necessary.

Mail your registration & payment to:
Geospatial Training Program
Middlesex County Extension Center
1066 Saybrook Road, PO Box 70
Haddam, CT 06438-0070

Cancellation Policy: Payment must be received with registration. A full refund will be issued if cancellation occurs more than 10 days prior to course. If you cancel within 10 days of the course and we are unable to fill your seat, we will not issue a refund.
