This one-day course introduces ArcGIS users to the capabilities and uses of ModelBuilder. The course explores how ModelBuilder works and how models can be created, edited and used to automate repetitive tasks or to run more complex analyses. While ModelBuilder is relative simple to use, this course is designed to present key concepts and techniques. Through a combination of brief classroom presentations and hands-on exercise in ArcGIS10, students will learn how to:

- Use the ModelBuilder interface in ArcGIS10 to create and edit simple models
- Add data and connect geoprocessing tasks to input/output datasets
- Automate geoprocessing workflows
- Establish model properties
- Control data parameters and variables in models
- Add models to ArcToolbox
- Run models form the ModelBuilder interface or from ArcToolbox
- Create user documentation and help files

University of Connecticut

Note: This is an introductory course, however participants should have some familiarity with desktop GIS, specifically ArcGIS 9.x or 10.

Mail your registration & payment to:
Geospatial Training Program
Middlesex County Extension Center
1066 Saybrook Road, PO Box 70
Haddam, CT 06438-0070

Cancellation Policy: Payment must be received with registration. A full refund will be issued if cancellation occurs more than 10 days prior to course. If you cancel within 10 days of the course and we are unable to fill your seat, we will not issue a refund.
